ad project to study flora & collection of local flora

## Report

- Students of B.sc III<sup>rd</sup> sem were taken to a field visit on 26/2/21 to study different type of flora in <sup>the</sup> near by fields.
- They got an idea of different types of vegetation growing in our vicinity such as herbs, shrubs, weeds, medicinal plants, root parasite plants, climbers, flowering plants; their habitat, morphology and uses.
- Students collected the flora for herbarium preparation and submitted the herbaria during practical exams. These herbaria helped students in identification of plants & taxonomic studies.
- 46 students participated in the visit along with their teachers Mrs. Amita & Dr. Sushila Jain
